

Lab 9

1. What are total functions?
2. What are partial functions?
3. What is the general purpose of *looking* functions and what kind of function (total or partial) are they?
4. Use three **lambda** statements to define a Scheme function that determines the length of lists with two or fewer arguments.
5. Use two **lambda** statements to define a Scheme function that determines the length of lists with two or fewer arguments.
